DETAILED ACTION

Specification

1. The title of the invention is not descriptive. A new title is required that is clearly indicative of the invention to which the claims are directed.

Claim Rejections - 35 USC § 112

2. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

3. Claims 2-6 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

The limitation "timing changing circuit changes said inactivation timing corresponding to a threshold voltage of transistors implemented in said internal circuit", lines 2-3 of claim 2, appears to be misdescriptive because the inactivation is adjusted by fuse circuit (18) corresponding to signals TESTX, TEST0 AND TEST1 as disclosed in figure 2 and page 7 of the specification.

The limitation "timing changing circuit changes said inactivation timing corresponding to said internal supply voltage which varies with a threshold voltage of transistors implemented in said voltage generator", lines 2-3 of claim 2, appears to be misdescriptive for the same reason set forth above.

Claims 4-6 are rendered indefinite by the deficiencies of the independent claims noted above.

Claim Rejections - 35 USC § 102

4. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

5. Claim 1 is rejected under 35 U.S.C. 102(b) as being anticipated by the lee reference (U.S. Patent 6,040,722).

Lee discloses in figure 3 an apparatus comprising a power-on resetting circuit (206) for activating a reset signal (PWR_ON_RESET) which initializes an internal circuit (10), for a predetermined period after a power supply is switched on, and then inactivating the reset signal (col. 2, lines 33-42); and a timing changing circuit (204) for changing an inactivation timing of the reset signal (col. 3, lines 55-67 and col.4 lines 1-9).

Conclusion

6. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

7. The merit of claims 2-6 cannot be determined due to severity of indefiniteness noted above. Threshold voltage of transistors implemented in the voltage generator changes power supply (VDD) providing to the power-on resetting circuit. However, these changes do not affect operation of the changing circuit (10) at all. That is why Examiner cannot examine claims 2-6 in view of the disclosure.
